## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q5

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Ted, the computer science enthusiast, has accepted the challenge of writing a program that checks if the number of digits in an integer matches the sum of its digits.

Guide Ted in designing and writing the code to solve this problem using a 'do-while' loop.

##### ***Input Format***

The input consists of an integer N, representing the number to be checked.

##### ***Output Format***

If the sum is equal to the number of digits, print "The number of digits in N matches the sum of its digits."

Else, print "The number of digits in N does not match the sum of its digits."

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 20

Output: The number of digits in 20 matches the sum of its digits.

### **Answer**

```
import java.util.*;

class main{
    public static void main(String[] args)
    {
        Scanner in=new Scanner(System.in);

        int a=in.nextInt();
        int p=a;
        int res=0,c=0;

        while(a>0)
        {
            res=res+(a%10);
            a=a/10;
            c=c+1;
        }

        if(res==c)
        {
            System.out.printf("The number of digits in %d matches the sum of its
digits.",p);
        }
        else{
            System.out.printf("The number of digits in %d does not match the sum
of its digits.",p);
        }
    }
}
```

}  
}  
**Status : Correct**

**Marks : 10/10**
