## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 3\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Rosh is intrigued by numerical patterns. Today, she stumbled upon a puzzle while working with arrays. She wants to compute the sum of the third-largest and second-smallest elements from a list of integers. She seeks your help to implement a program that solves this for her efficiently.

##### ***Input Format***

The first line of input is an integer N, representing the size of the array.

The second line of input consists of N space-separated integers, representing the elements of the array.

##### ***Output Format***

The output displays a single integer representing the sum of the third-largest and second-smallest elements in the array.

Refer to the sample output for the formatting specifications.

### **Sample Test Case**

Input: 10

10 20 30 40 50 60 70 80 90 100

Output: 100

### **Answer**

```
import java.util.*;

class main{
    public static void main(String[] args)
    {
        Scanner in= new Scanner(System.in);

        int n=in.nextInt();
        int[] arr = new int[n];

        for(int i=0; i<n; i++)
        {
            arr[i]=in.nextInt();
        }

        for(int i=0; i<n; i++)
        {
            for(int j=0; j<n-1; j++)
            {
                if(arr[j]>arr[j+1])
                {
                    int temp=arr[j];
                    arr[j]=arr[j+1];
                    arr[j+1]=temp;
                }
            }
        }

        System.out.print(arr[n-3]+arr[1]);
    }
}
```

}

**Status :** Correct

**Marks : 10/10**
