## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 8\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotExceptionAtTheRateExceptionDomainException

A typical email address should have a ". " character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

#### ***Input Format***

The first line of input contains the email to be validated.

#### ***Output Format***

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

### **Sample Test Case**

Input: sample@gmail.com

Output: Valid email address

### **Answer**

```
import java.util.*;  
  
class DotException extends Exception {  
    DotException(String msg) {  
        super(msg);  
    }  
}  
  
class AtTheRateException extends Exception {  
    AtTheRateException(String msg) {  
        super(msg);  
    }  
}  
  
class DomainException extends Exception {  
    DomainException(String msg) {  
        super(msg);  
    }  
}  
  
public class Main {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);  
        String email = sc.nextLine();  
        try {  
            validateEmail(email);  
            System.out.println("Valid email address");  
        } catch (DotException e) {  
            System.out.println("DotException: " + e.getMessage());  
            System.out.println("Invalid email address");  
        } catch (AtTheRateException e) {  
            System.out.println("AtTheRateException: " + e.getMessage());  
        }  
    }  
}
```

```
        System.out.println("Invalid email address");
    } catch (DomainException e) {
        System.out.println("DomainException: " + e.getMessage());
        System.out.println("Invalid email address");
    }
}

public static void validateEmail(String email) throws DotException,
AtTheRateException, DomainException {
    if (email.startsWith(".") || email.endsWith(".") || email.startsWith("@") || email.endsWith("@"))
        throw new DotException("Invalid Dot usage");
    if (email.chars().filter(ch -> ch == '@').count() != 1)
        throw new AtTheRateException("Invalid @ usage");
    int atIndex = email.indexOf('@');
    String afterAt = email.substring(atIndex + 1);
    if (!afterAt.contains("."))
        throw new DotException("Invalid Dot usage");
    if (email.contains(..) || email.contains("@@"))
        throw new DotException("Invalid Dot usage");
    String[] parts = email.split("\\.");
    String domain = parts[parts.length - 1];
    List<String> validDomains = Arrays.asList("in", "com", "net", "biz");
    if (!validDomains.contains(domain))
        throw new DomainException("Invalid Domain");
}
}
```

**Status : Correct**

**Marks : 10/10**
